Contents for Volume 150

Number 1, 7 May 1991

KOHN, M. C., Dedication	1
KOHN, M. C. and LEMIEUX, D. R., Identification of Regulatory Properties of Metabolic Networks by Graph Theoretical Modeling	3
ZHU, C., A Thermodynamic and Biomechanical Theory of Cell Adhesion Part I: General Formulism	27
BING-ZHENG, L. and GOU-MIN, D., An Improved Mathematical Model of Hormone Secretion in the Hypothalamo-Pituitary-Gonadal Axis in Man	51
QUON, M. J. and CAMPFIELD, L. A., A Mathematical Model and Computer Simulation Study of Insulin Receptor Regulation	59
LEMIEUX, D. R. and KOOTSEY, J. M., Simulation of the Voltage Dependence of the Na, K Pump Applied to Cardiac Cells	73
QUON, M. J. and CAMPFIELD, L. A., A Mathematical Model and Computer Simulation Study of Insulin Sensitive Glucose Transporter Regulation	93
ACHS, M. J., GARFINKEL, L. and GARFINKEL, D., A Computer Model of Pancreatic Islet Glycolysis	109

Number 2, 21 May 1991

WALTER, G. H., What is Resource Partitioning?	137
FRANCE, J., SIDDONS, R. C., DHANOA, M. S. and THORNLEY, J. H. M., A Unifying Mathematical Analysis of Methods to Estimate Rumen Volume Using Digesta Markers and Intrauminal Sampling	145
DEXTER, F., RUDY, Y., LEVY, M. N. and BRUCE, E. N., Mathematical Model of Cellular Basis for the Respiratory Sinus Arrhythmia	157
LOEFFLER, M. and GROSSMANN, B., A Stochastic Branching Model with Formation of Subunits Applied to the Growth of Intestinal Crypts	175
TAWADA, K. and SEKIMOTO, K., Protein Friction Exerted by Motor Enzymes Through a Weak-binding Interaction	193
WHITE, R. A., A Theory for Analysis of Cell Populations with Non-cycling S Phase Cells	201

AOKI, I., Entropy Principle for Human Development, Growth and Aging	215
VERTOSICK, F. T. and KELLY, R. H., The Immune System as a Neural Network: A Multi-epitope Approach	225
RADDING, W., Proposed Partial β -structures for Lac Permease and the Na^+/H^+ Antiporter which use Similar Transport and H^+ Coupling Mechanisms	239
ATKINSON, D., Sexual Showiness and Parasite Load: Correlations Without Parasite Coevolutionary Cycles	251
LE GUYADER, H. and HYVER, C., Duplication of Cortical Units on the Cortex of Paramecium: A Model Involving a Ca^{2+} Wave	261

Number 3, 7 June 1991

SANYAL, N. K., OJHA, R. P. and ROYCHOUDHURY, M., Interaction Energy Studies on Antibiotics Nucleoside Analogs 2-Azaadenine	277
TOURTELLOT, M. K., COLLINS, R. D. and BELL, W. J., The Problem of Movlength and Turn Definition in Analysis of Orientation Data	287
FORBES, L. S., Optimal Size and Number of Offspring in a Variable Environment	299
DAVIS, D. N., Models for the Movement of Mono-oriented Chromosomes	305
MATTHECK, C. and REUSS, S., The Claw of the Tiger: An Assessment of its Mechanical Shape Optimization	323
VICKERS, G. T., Spatial Patterns and Travelling Waves in Population Genetics	329
NOWAK, M., The Evolution of Viruses. Competition Between Horizontal and Vertical Transmission of Mobile Genes	339
ALEXANDER, R. MCN., Optimum Timing of Muscle Activation for Simple Models of Throwing	349
HAIG, D., Developmental Asynchrony and Environmental Sex Determination in Alligators	373
PENOTTI, F. E., Human Pre-mRNA Splicing Signals	385

Number 4, 21 June 1991

LIBERMAN, U., On the Relation Between the Instability of ESS in Discrete Dynamics and Segregation Distortion	421
WANG, Z.-X., Theoretical Considerations of the Tsou Plot	437
FORSDYKE, D. R., Early Evolution of MHC Polymorphism	451

SMITH, B. R., WOJCIOWICZ, J. M. and ATWOOD, H. L., Maximum Likelihood Estimation of Non-uniform Transmitter Release Probabilities at the Crayfish Neuromuscular Junction	457
WARBURTON, K. and LAZARUS, J., Tendency-Distance Models of Social Cohesion in Animal Groups	473
GLASS, J. D., A Sequence Related to the Human Gonadoliberin Precursor Near the N-termini of HIV and SIV gag Polyproteins	489
MCKNIGHT, K. B. and ROUNDY, R. O., Optimal Gill Packing in Agaric Sporocarps	497
COHEN, R. J., Determining Rate Constants for Irreversible Polymerization Where the Initial Step and Propagation Steps Have Different Rate Constants: Consideration of Polyadenylate Polymerase	529
QUINN, T. P., Models of Pacific Salmon Orientation and Navigation on the Open Ocean	539
KIANI, M. F. and HUDETZ, A. G., Computer Simulation of Growth of Anastomosing Microvascular Networks	547

LETTER TO THE EDITOR

HURST, L. D. and NURSE, P., A Note on the Evolution of Meiosis	561
--	-----

Index to Volume 150

- ACHS, M. J., GARFINKEL, L. and GARFINKEL, D., A computer model of pancreatic islet glycolysis, 109
- Adhesion, cell; general formulism of a thermodynamic and biomechanical theory, 27
- Agaric sporocarps, optimal gill packing in, 497
- Aging, human, entropy principle for, 215
- ALEXANDER, R. MCN., Optimum timing of muscle activation for simple models of throwing, 349
- Alligators, developmental asynchrony and environmental sex determination in, 373
- Anastomosing microvascular networks, computer simulation of growth of, 547
- Animal groups, tendency-distance models of social cohesion in, 473
- Antibiotics nucleoside analogs 2-azaadenine, interaction energy studies on, 277
- Antiporter, Na^+/H^+ , proposed partial β -structures for lac permease and; use of similar transport and H^+ coupling mechanisms, 239
- AOKI, I., Entropy principle for human development, growth and aging, 215
- Arrhythmia, sinus, respiratory, mathematical model of cellular basis for, 157
- Asynchrony, developmental, and environmental sex determination in alligators, 373
- ATKINSON, D., Sexyal showiness and parasite load: correlations without parasite coevolutionary cycles, 251
- ATWOOD, H. L. (see SMITH, B. R.), 457
- 2-Azaadenine: interaction studies on antibiotics nucleoside analogs, 277
- BELL, W. J. (see TOURTELLOT, M. K.), 287
- β -structures, partial, proposed, for lac permease and the Na^+/H^+ antiporter which use similar transport and H^+ coupling mechanisms, 239
- BING-ZHENG, L. and GOU-MIN, D., An improved mathematical model of hormone secretion in the hypothalamo-pituitary-gonadal axis in man, 51
- Biomechanical and thermodynamic theory of cell adhesion; general formulation, 27
- BRUCE, E. N. (see DEXTER, F.), 157
- Ca^{2+} wave in a model of duplication of cortical units on the cortex of paramecium, 261
- CAMPFIELD, L. A. (see QUON, M. J.), 59, 93
- Cardiac cells, simulation of the voltage dependence of the Na, K pump applied to, 73
- Cell adhesion: general formulism of a thermodynamic and biomechanical theory, 27
- Cells, cardiac, simulation of the voltage dependence of the Na, K pump applied to, 73
- Cell populations with non-cycling S phase cells, a theory for analysis of, 201
- Cellular basis for the respiratory sinus arrhythmia, mathematical model of, 157
- Chromosomes, mono-oriented, models for the movement of, 305
- Claw of the tiger: an assessment of its mechanical shape optimization, 323
- Coevolutionary cycles, parasite, correlations without; sexual showiness and parasite load, 251
- COHEN, R. J., Determining rate constants for irreversible polymerization where the initial step and propagation steps have different rate constants: consideration of polyadenylate polymerase, 529
- Cohesion, social, in animal groups, tendency-distance sensitive models of, 473
- COLLINS, R. D. (see TOURTELLOT, M. K.), 287
- Competition between horizontal and vertical transmission of mobile genes; the evolution of viruses, 339
- Computer model of pancreatic islet glycolysis, 109

- Computer simulation of growth of anastomosing microvascular networks, 547
- Computer simulation of insulin receptor regulation, 59
- Computer simulation study of insulin sensitive glucose transporter regulation, 93
- Cortical unit duplication on the cortex of paramecium: a model involving a Ca^{2+} wave, 261
- Crayfish neuromuscular junction, maximum likelihood estimation of non-uniform transmitter release probabilities at, 457
- Crypts, intestinal, a stochastic branching model with formation of subunits applied to the growth of, 175

- DAVIS, D. N., Models for the movement of mono-oriented chromosomes, 305
- Dedication, 1
- Development, human, entropy principle for, 215
- Developmental asynchrony and environmental sex determination in alligators, 373
- DEXTER, F., RUDY, Y., LEVY, M. N. and BRUCE, E. N., Mathematical model of cellular basis for the respiratory sinus arrhythmia, 157
- DHANO, M. S. (see FRANCE, J.), 145
- Digesta markers, a unifying mathematical analysis of methods to estimate rumen volume using, 145
- Dynamics, discrete, and segregation distortion, on the relation between the instability of ESS in, 421

- Entropy principle for human development, growth and aging, 215
- Environment, variable, optimal size and number of offspring in, 299
- Environmental sex determination in alligators, developmental asynchrony and, 373
- Enzymes, motor, protein friction exerted by, through a weak-binding interaction, 193
- ESS instability in discrete dynamics and segregation distortion, on the relation between, 421
- Evolution, early, of MHC polymorphism, 451
- Evolution of meiosis, a note on (letter), 561
- Evolution of viruses. Competition between horizontal and vertical transmission of mobile genes, 339

- FORBES, L. S., Optimal size and number of offspring in a variable environment, 299
- FORSDYKE, D. R., Early evolution of MHC polymorphism, 451
- FRANCE, J., SIDDONS, R. C., DHANO, M. S. and THORNLEY, J. H. M., A unifying mathematical analysis of methods to estimate rumen volume using digesta markers and intrauminal sampling, 145
- Friction, protein, exerted by motor enzymes through a weak-binding interaction, 193

- gag* polyproteins, HIV and SIV, a sequence related to the human gonadoliberin precursor near the N-termini of, 489
- GARFINKEL, D. (see ACHS, M. J.), 109
- GARFINKEL, L. (see ACHS, M. J.), 109
- Genes, mobile, competition between horizontal and vertical transmission of; the evolution of viruses, 339
- Genetics, population, spatial patterns and travelling waves in, 329
- Gill packing, optimal, in agaric sporocarps, 497
- GLASS, J. D., A sequence related to the human gonadoliberin precursor near the N-termini of HIV and SIV *gag* polyproteins, 489
- Glucose transporter regulation, insulin sensitive, a mathematical model and computer simulation study of, 93
- Glycolysis, pancreatic islet, a computer model of, 109
- Gonadal-hypothalamo-pituitary axis in man, an improved mathematical model of hormone secretion in, 51

- Gonadoliberin precursor, human; a related sequence near the N-termini of HIV and SIV *gag* polyproteins, 489
- GOU-MIN, D. (see BING-ZHENG, L.), 51
- Graph theoretical modeling, identification of regulatory properties of metabolic networks by, 3
- GROSSMANN, B. (see LOEFFLER, M.), 175
- Groups, animal, tendency-distance models of social cohesion in, 473
- Growth of anastomosing microvascular networks, computer simulation of, 547
- Growth, human, entropy principle for, 215
- Growth of intestinal crypts, a stochastic branching model with formation of subunits applied to, 175
- HAIG, D., Developmental asynchrony and environmental sex determination in alligators, 373
- HIV and SIV *gag* polyproteins, a sequence related to the human gonadoliberin precursor near the N-termini of, 489
- Hormone secretion in the hypothalamo-pituitary-gonadal axis in man; an improved mathematical model, 51
- HUDETZ, A. G. (see KIANI, M. F.), 547
- Human development, growth and aging, entropy principle for, 215
- Human gonadoliverin precursor; a related sequence near the N-termini of HIV and SIV *gag* polyproteins, 489
- Human pre-mRNA splicing signals, 385
- HURST, L. D. and NURSE, P., A note on the evolution of meiosis (letter), 561
- H⁺ coupling mechanisms; proposed partial β -structures for lac permease and the Na⁺/H⁺ antiporter, 239
- Hypothalamo-pituitary-gonadal axis in man, an improved mathematical model of hormone secretion in, 51
- HYVER, C. (see LE GUYADER, H.), 261
- Immune system as a neural network: a multi-epitope approach, 225
- Instability of ESS in discrete dynamics and segregation distortion, on the relation between, 421
- Insulin receptor regulation, a mathematical model and computer simulation study of, 59
- Insulin sensitive glucose transporter regulation, a mathematical model and computer simulation study of, 93
- Interaction energy studies on antibiotics nucleoside analogs 2-azaadenine, 277
- Intestinal crypts, a stochastic branching model with formation of subunits applied to the growth of, 175
- Intrauminal sampling, a unifying mathematical analysis of methods to estimate rumen volume using digesta markers and, 145

The first of these is the fact that the population of the United States in 1870 was 38,556,000, or about 10 per cent. more than in 1860. This increase was due to a number of causes, the most important of which were the immigration of foreign-born persons and the natural increase of the native-born population.

The second of these is the fact that the population of the United States in 1870 was 38,556,000, or about 10 per cent. more than in 1860. This increase was due to a number of causes, the most important of which were the immigration of foreign-born persons and the natural increase of the native-born population.

The third of these is the fact that the population of the United States in 1870 was 38,556,000, or about 10 per cent. more than in 1860. This increase was due to a number of causes, the most important of which were the immigration of foreign-born persons and the natural increase of the native-born population.

The fourth of these is the fact that the population of the United States in 1870 was 38,556,000, or about 10 per cent. more than in 1860. This increase was due to a number of causes, the most important of which were the immigration of foreign-born persons and the natural increase of the native-born population.

The fifth of these is the fact that the population of the United States in 1870 was 38,556,000, or about 10 per cent. more than in 1860. This increase was due to a number of causes, the most important of which were the immigration of foreign-born persons and the natural increase of the native-born population.

The sixth of these is the fact that the population of the United States in 1870 was 38,556,000, or about 10 per cent. more than in 1860. This increase was due to a number of causes, the most important of which were the immigration of foreign-born persons and the natural increase of the native-born population.
